

Seven capabilities.

One robot.

🗺️ Autonomous Navigation

LiDAR + ROS 2 — moves independently through museum halls with live obstacle avoidance.

💬 Conversational AI

Free-form dialogue powered by an LLM — answers follow-up questions, not just scripted lines.

🌐 Multilingual

Arabic, English, French and more — switches language mid-conversation on demand.

😊 Mood & Age Detection

Real-time vision adapts tone, vocabulary, and pace to each individual visitor.

♿️ Accessibility First

Captions, large fonts, audio narration, RTL support — built in, not bolted on.

📱 Touchscreen Web App

Interactive exhibit map, chat interface, and settings — all on the robot's integrated display.

THE PROBLEM WE SOLVE

Museums are losing *millions* of visitors to silence.

19K

VISITORS/DAY
AT GEM PEAK

45%

FOREIGN VISITORS
WITHOUT A GUIDE

1

LANGUAGE ON
MOST AUDIO GUIDES

At peak hours, most visitors walk through with no narration. Audio guides play identical scripts regardless of age, interest, or language. Human guides can't scale to thousands of daily visitors. THOTH closes this gap — permanently.
